

Acid Scavenging Solution

Eliminates Acid Buildup in AC&R Systems.

Prevents Compressor Burnout!

- Twice as concentrated as competitive solutions
- Works with all refrigerants and lubricants (mineral oil, polyol ester and alkyl benzene)
- Compatible with semi-hermetic, hermetic and scroll compressors
- Direct, reusable injector eliminates the need for an oil pump
- Prefilled, disposable cartridges are easy to use

EASY

ACID-BUSTER is a ready-to-use acid scavenging solution that can be injected directly into an air-conditioning or refrigeration system. Simply connect the injector to the system's low-side service port and turn the handle to inject the exact amount of ACID-BUSTER required.

ECONOMICAL

Using ACID-BUSTER is the most cost-effective way to clean up acid build-up in any AC&R system. Only ½ oz of super-concentrated ACID-BUSTER is needed to treat one quart of system oil, half as much as competitive solutions.

SAFE

Can be used with all AC&R systems. It does not contaminate the refrigerant or lubricant or leave behind a residue of corrosive salts. ACID-BUSTER is designed for use in CFC, HCFC and HFC refrigerants using mineral oil, polyol ester and alkyl benzene lubricants.

PROTECTS AGAINST OVERDOSING

Our patented injectors and graduated cartridges let you introduce the precise amount of ACID-BUSTER into the system. This helps preserve the integrity of the lubricant. Competitive products can damage lubricant properties because they require that the entire bottle of acid treatment be used, even when only a small portion is needed.

PERFECT FOR PREVENTIVE MAINTENANCE!

Standard maintenance procedures for acid build-up problems require performing frequent oil changes to dilute acids or require flushing the entire system periodically to remove acids. ACID-BUSTER eliminates these expensive and time-consuming methods since it is specially formulated to remain safely in the system.
